THE DIFFERENCE BETWEEN BACK PAIN & SCIATICA

Have you been struggling with persistent back pain and been told it's because you have sciatica? Does your pain travel down your leg? It can be challenging to understand when it seems like even the medical community disagrees with what to call your condition. Fortunately, at Fyzical Therapy & Balance Centers, we can clear it up for you and set you on the right path for relief!

As many as 80 percent of adults in the United States struggle with back pain at some point in their lives. Back pain can start for a variety of reasons. Being in a car accident, bending to pick something off the ground after a long car ride, and for some, just waking up in the morning seems to be the cause.

Unfortunately, up to 90% of low back pain diagnoses are non-specific. This means that not only do people suffer from back pain, but the exact cause may be difficult to identify. Confusion about the source of pain is complicated enough, but some of the confusion is in the diagnosis terminology.

To clarify what you need to do to alleviate your pain, your physical therapist can categorize your pain, so you understand what is happening and, more importantly, what to do about it!

Call Fyzical Therapy & Balance Centers today and schedule an appointment with one of our spine experts to get the answers you need to get back to the life you want to live!

UNDERSTANDING THE DIFFERENCE BETWEEN BACK PAIN AND SCIATICA

Being educated about your back pain can help you make the right choices to overcome it as quickly as possible. One of the biggest

problems with back pain is that it persists. One day it is here; the next day, it is gone. Not understanding why it comes or how to make it go away will lead many people to deal with back pain for years on end without seeking help.

Back pain is pain that is felt in the lower back and lower back, and buttocks. Typically, back pain develops as a result of strain or sprain, prolonged postures, or sometimes for no apparent reason. The different mechanisms do not change the essential characteristic defining lower back pain; it is felt in the lower back and/or lower back and buttocks.

Often people are told they have sciatica when they experience pain in the buttock, but sciatica is a different classification and has its characteristics. Sciatica is often a debilitating condition that is a result of compression or inflammation of the sciatic nerve. The condition most commonly is associated with pain radiating down the leg. It can be so severe that people struggle to do everyday activities.

Sciatica pain develops in the nerves that exit the spinal canal and travel into the legs, and so while the pain itself technically starts in the back, the experience of the pain is felt in the leg(s). What's more, sciatica pain doesn't always develop like pain in the traditional sense. Sciatica can be tingling, numbness, and weakness in the leg(s).

HOW PHYSICAL THERAPY CAN HELP YOU FIND RELIEF

If you are experiencing back pain or sciatica and haven't talked to a physical therapist about your concerns, then now is the time to take action. Working with a physical therapist can help you understand what you are dealing with and, most importantly, how to resolve it once and for all!

Whether you come to physical therapy with lower back pain or sciatica, your physical therapist will perform a thorough physical examination and provide you with solutions that work based on the finding.

1. Education

Understanding what you are experiencing and how to manage it can help you be proactive and find a solution. Understanding what is going on, and more importantly, what you can do about it, is one of the most effective solutions. It may seem insignificant, but it turns out to be one of the most important steps towards a solution.

2. Manual therapy

Physical therapists often use manual therapy for their patients with sciatica. Manual therapies include a variety of techniques that move one or more joints within normal ranges of motion to improve spinal joint motion or function. It can also include soft tissue techniques that help to alleviate pain and allow for more mobility and improved function.

3. Exercise therapy

Supervised exercises are vital to a successful outcome. A physical therapist will tailor your exercises, monitor you, and progress you based on your individual needs. Supervised exercise therapy includes directional exercises, proper postural exercises, nerve mobilization, or strength exercises.

Working with a physical therapist is, hands down, the best thing you can do when you are looking to overcome back pain or sciatica. A physical therapist can identify the cause of the back pain/sciatica and present you with helpful strategies to reduce your pain, strengthen your back and improve your function.

CALL OUR CLINIC TODAY

If you're experiencing back pain or sciatica, don't wait. Call Fyzical Therapy & Balance Centers today and schedule your first appointment to have your condition assessed and get the guidance you need to get back to life!

MINDFULNESS EXERCISES

Do you find yourself becoming overwhelmed easily in your daily life? Do you constantly feel stressed? If so, you may benefit from practicing mindfulness.

Mindfulness is the process of bringing one's attention to the present moment and observing one's thoughts and feelings without judging them. It can be applied to anything from eating, walking, or washing dishes to formal meditation practices.

If you're looking for ways to reduce stress and promote wellbeing—check out the mindfulness exercises below.

1. The full body scan

Begin this exercise by lying on your back with your palms facing up and your feet falling slightly apart. Start to bring awareness to your breath, noticing each inhale and exhale. Try not to change the way you're breathing; instead, simply practice observing your existing breathing pattern.

Next, focus on how your feet feel, noticing whether you observe a sensation of heaviness or lightness. Slowly move your attention up throughout your entire body to complete a full-body scan.

2. The 5 senses test

Another way to check in with your body is to perform this 5 senses exercise. Begin by determining 5 things you can see. Then move to 4 things you can feel, 3 things you can hear, 2 things you can smell, and 1 thing you can taste. Many people find this activity grounding and report that it can help soothe panic and anxiety.

3. The 3-minute breathing space

If you are new to meditation, this is the perfect activity for you. It is a simple 3-minute exercise designed to help those with busy lives and minds. During the first minute of this meditation, focus on answering the question, "How am I doing right now?"

For the second minute, shift your focus to your breath, noticing each inhale and exhale. The last minute should be spent scanning up and down your body, observing how your breath affects your entire body. You can place a hand on your stomach or chest to help you concentrate on how your body moves.

FEEL BETTER BY EATING BETTER PEANUT BUTTER ENERGY BOMBS

- 2 cups old-fashioned rolled oats
- ½ cup ground flax seed
- 1 tbsp black chia seeds
- 1 tsp cinnamon
- ½ cup raw honey
- ½ cup peanut butter
- 1 tsp vanilla extract
- 1 scoop vanilla whey protein powder
- ½ cup dark chocolate chips

Add rolled oats, ground flax seed, chia seeds, cinnamon, honey, peanut butter, vanilla extract, and vanilla protein powder to food processor. Pulse until ingredients are blended (about 7-9 times). Add mixture to a large bowl, add in chocolate chip. Stir to combine.

Form energy bite mixture into 1" balls and place on parchment paper lined baking sheet. Cover and place in refrigerator for 2 hours.
