S.O.S THERAPY

*"The subject demonstrated improvements in the areas of speed, balance, and confidence at the end of the treatment intervention, which were maintained one-month post treatment. These results suggest that use of the OHST (Overhead Harness Support System) with a focus on gait mechanics and balance benefited the subject, improving her overall function."*

*Journal of Neurologic Physical Therapy: December 2006 - Volume 30 - Issue 4 - p 217-218*
